PROFESSIONAL SUMMARY

Detail-oriented B.Tech graduate with hands-on experience in Python, SQL, and Power BI. Proficient in data cleaning, exploratory data analysis, dashboard development, predictive modeling, and deriving actionable business insights. Seeking entry-level roles in Data Analytics, Business Intelligence, or IT to apply analytical and problem-solving skills in a growth-oriented organization.

TECHNICAL SKILLS

Languages: Python
Database: SQL
Visualization Tools: Power BI, Excel
Development Tools: Streamlit, Jupyter Notebook

PROJECTS

Machine Learning Based Fraud Detection System | Python, Pandas, Scikit-learn, Streamlit | 2025

- Developed a machine learning model to classify banking transactions as fraudulent or legitimate using Logistic Regression.
- Performed data preprocessing, feature scaling, train-test splitting, and exploratory analysis on synthetic financial transaction records.
- Evaluated the classifier using accuracy score, confusion matrix, precision, recall, and F1-score, achieving **91% classification accuracy** with **93% precision** in fraud detection.
- Serialized the trained model using Pickle and deployed a Streamlit-based web application for real-time fraud transaction prediction.

Property Price Prediction Model | Python, Pandas, Scikit-learn, Streamlit | 2025

- Developed a machine learning-based regression model to estimate residential property prices using housing features such as area, bedrooms, bathrooms, parking, location score, property age, and furnishing status.
- Performed Excel dataset loading, preprocessing, feature-target separation, and train-test splitting on structured housing records.
- Trained and evaluated a Linear Regression model, achieving an **R^2 score of 0.993** with a low mean absolute error of **44,113**.
- Serialized the trained model using Pickle and deployed a Streamlit web application for real-time property value prediction.

Customer Behavior Dashboard | Power BI, Excel | 2026

- Developed an interactive Customer Shopping Behavior Dashboard using Power BI to analyze sales trends, customer demographics, and purchasing patterns.
- Designed dynamic visualizations including bar chart, pie chart, donut chart and slicers for real-time business performance analysis.
- Analyzed customer behavior, payment methods, and product category performance to support data-driven decision-making and improve sales strategies.
- These visualizations help users quickly understand shopping patterns and business performance.

EDUCATION

B.Tech in Mechanical Engineering | DNR College of Engineering and Technology | 2023 – 2026
Diploma in Mechanical Engineering | Nuzvid Polytechnic | 2020 – 2023

CERTIFICATIONS

Google Advanced Data Analytics — Coursera / Google | Skills: Python, Machine Learning, Data Visualization
